

ROVELO

ARCTIC VISION RW01

STUDDABLE WINTER TIRE

Rovelo Arctic Vision RW01 is a highly reliable studdable winter tire designed to take on everything winter throws its way. With superior traction on snow, ice, and in frigid temperatures, the Arctic Vision RW01 proudly carries both the 3PMS (Three-Peak Mountain Snowflake) certification and the IGS (Ice Grip Symbol). Crafted with flexible rubber compounds engineered for the coldest conditions, and featuring a directional tread pattern that efficiently evacuates slush and snow, this tire delivers consistent grip and confident handling throughout your winter journeys. Whether you're facing a fresh snowfall or icy roads, the Arctic Vision RW01 is always ready when you are — built to help you embrace and enjoy the winter season.

ANGLED TREAD BLOCKS - 3PMS (WINTER TRACTION) CERTIFIED

Tread blocks are strategically angled to bite into snow and ice, enhancing traction and braking performance.

WINTER GRIP - IGS (ICE GRIP) CERTIFIED

RW01 incorporates high-density, multi-angle sipes that increase grip on ice and compact snow.

IMPROVED HYDROPLANING RESISTANCE

V-shaped grooves quickly evacuate water and slush, maintaining consistent contact with the road surface.

Le Rovelo Arctic Vision RW01 est un pneu d'hiver cloutable fiable, conçu pour affronter les conditions hivernales rigoureuses. Certifié 3PMS et IGS (symbole de traction sur glace), il offre une excellente traction sur la neige et la glace. Sa gomme résistante au froid et sa bande de roulement directionnelle assurent une adhérence et une maniabilité constantes, faisant de ce pneu un choix sûr pour la conduite hivernale.

PAVÉS DE GOMME EN ANGLE - HOMOLOGATION 3PMS POUR LA TRACTION DANS DES CONDITIONS HIVERNALES

Les pavés de gomme sont stratégiquement inclinés pour mieux adhérer à la neige et à la glace, améliorant ainsi la traction et les performances de freinage.

ADHÉRENCE HIVERNALE - SYMBOLE D'ADHÉRENCE SUR GLACE

Le pneu RW01 est doté de lamelles à angles multiples et à haute densité qui améliorent l'adhérence sur la glace et la neige compacte.

RÉSISTANCE À L'AQUAPLANAGE AMÉLIORÉE

Les rainures en V évacuent rapidement l'eau et la neige fondante, assurant un contact uniforme avec la surface de la route.
